Raport 2

Aleksander Milach 24 March 2018

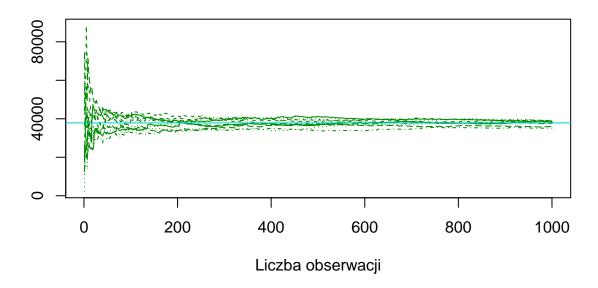

Zadanie 1

Srednia	Mediana	SD	IQR	Procent osób z co najmniej
dochodu	dochodu	dochodu	dochodu	licencjatem
37864.61	29717	36158.03	29503.5	

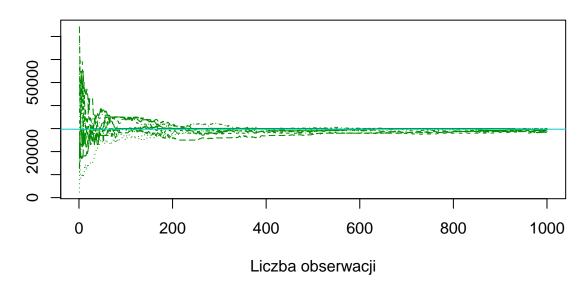

Część osób z zarobkami w przedziale [ś $rednia - 2\sigma$, ś $rednia + 2\sigma$] to 96.4239074, w tym przypadku to nawet więcej obserwacji niż w oszacowaniu z wykładu (95%).

Podpunkt a

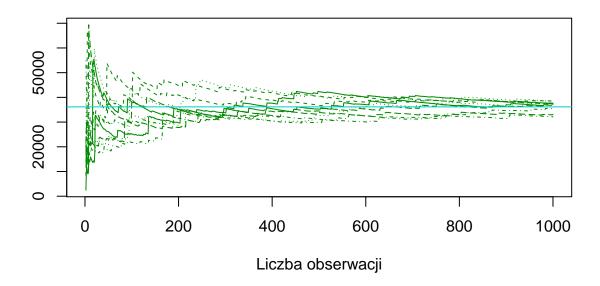

Srednie w 10 eksperymentach

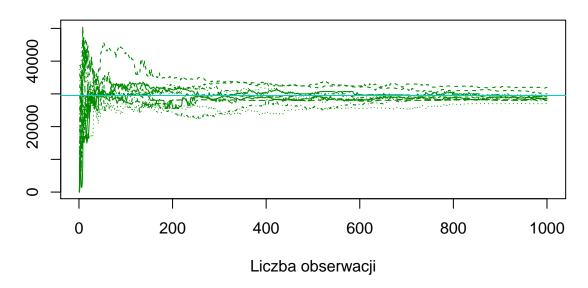

Mediany w 10 eksperymentach

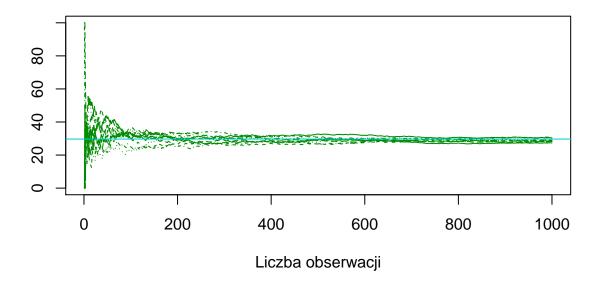

SD w 10 eksperymentach

IQR w 10 eksperymentach

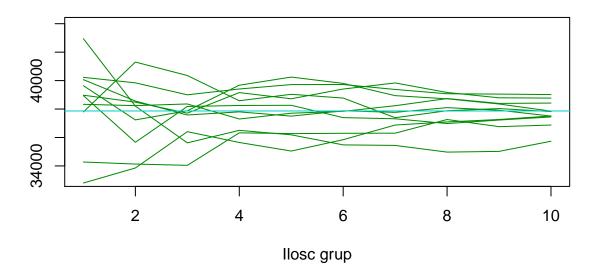

Procent co najmniej licencjatów w 10 eksperymentach

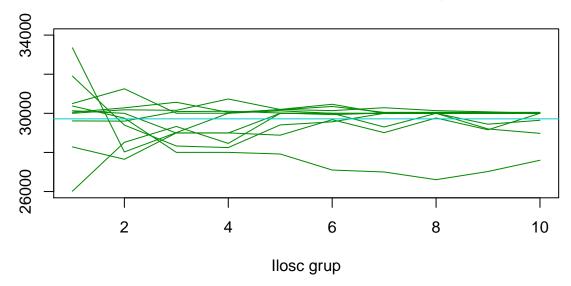

Podpunkt b

```
M=matrix(0,10,1000)
for(j in 1:10)
{
  set.seed(j+10)
p=round(table(t[[6]])/dim(t)[1]*100)
prywatni=which(t[[6]]==names(p)[1])
rzadowi=which(t[[6]]==names(p)[2])
sami=which(t[[6]]==names(p)[3])
M[j,]=as.vector(rbind(matrix(sample(prywatni,10*p[1]),p[1],10),
matrix(sample(rzadowi,10*p[2]),p[2],10),
matrix(sample(sami,10*p[3]),p[3],10)))
plot(0,xlim=c(1,10),ylim=c(33000,44000),xlab="Ilosc grup",ylab="",
     main="Srednie po dodawaniu kolejnych grup")
for(k in 1:10)
{
  points(sapply(1:10, function(i) mean(t[M[k,][1:(100*i)],5])),type="l",col="green4")
abline(mean(t[[5]]),0,col="cyan3")
```

Srednie po dodawaniu kolejnych grup

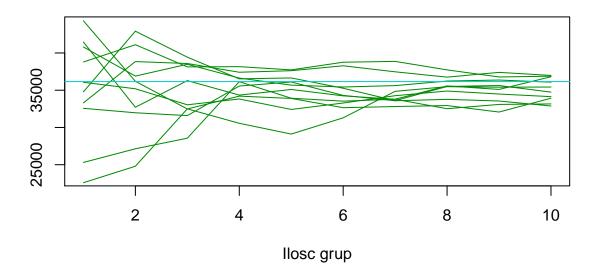

Mediany po dodawaniu kolejnych grup

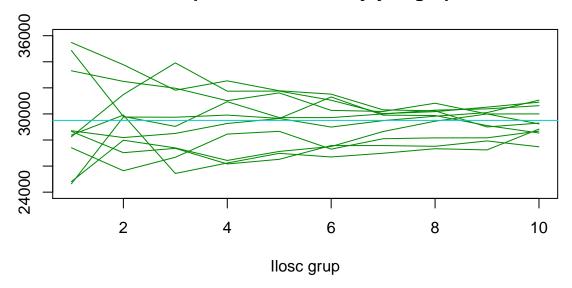

```
plot(0,xlim=c(1,10),ylim=c(23000,44000),xlab="Ilosc grup",ylab="",
```

```
main="SD po dodawaniu kolejnych grup")
for(k in 1:10)
{
    points(sapply(1:10, function(i) sd(t[M[k,][1:(100*i)],5])),type="l",col="green4")
}
abline(sd(t[[5]]),0,col="cyan3")
```

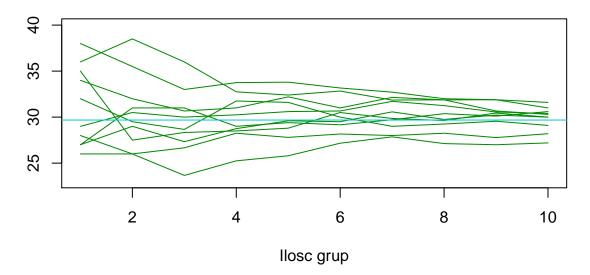

SD po dodawaniu kolejnych grup

IQR po dodawaniu kolejnych grup

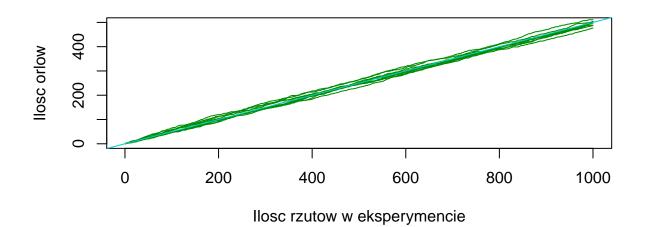

Procenty co najmniej licencjatów po dodawaniu kolejnych grup

Zadanie 2

```
r=matrix(sample(0:1,10000,replace = TRUE),1000,10)
w=rbind(sapply(1:1000,function(i) apply(matrix(r[1:i,],i,10),2,sum)),
sapply(1:1000,function(i) apply(matrix(r[1:i,],i,10),2,mean)))
plot(w[1,],type='l',col="green4",xlab="Ilosc rzutow w eksperymencie",ylab="Ilosc orlow")
sapply(2:10, function(i) points(w[i,], type='l',col="green4"))
abline(0,0.5,col="cyan3")
```

```
plot(w[11,],type='l',col="green4",xlab="Ilosc rzutow w eksperymencie",ylab="Frakcja orlow",ylim=c(0,1))
sapply(12:20, function(i) points(w[i,], type='l',col="green4"))
abline(0.5,0,col="cyan3")
```
